

FlexRoll®

Edge Protection on a Roll

Conforms to any shape, fits any size!

FlexRoll is a continuous-length roll designed to protect curved, round and irregular-shaped products by conforming to their edges to ensure the material beneath does not get damaged during shipping and storage.

Pre-bent, evenly spaced sequential pieces allow for quick and easy application to edges of rolled and contoured products.

- Excellent for curved, round and irregular-shaped products
- Ideal for converters of paper and other roll stock materials or any application where lighter-weight protection would be appropriate
- Separates rolls from contact with truck, walls and floor; ideal way to create a barrier between individual rolls
- 250-ft rolls are available in two grades, .040" and .050", to meet the needs of your particular application
- Current standard size is a 3.5" band with 5" pre-bent triangular fingers
- Custom sizes and printing options available upon request
- Compatible with other forms of roll packaging such as headers, banding and stretch wrapping
- Recyclable and environmentally friendly
- Sold in full pallet loads
- Sample pack available with 50-ft coil for trial evaluation

FlexRoll comes packaged two rolls in one convenient box.

This innovative packaging solution is easy to handle and easy to apply to products.
